Guia10

MATERIA: Desarrollo de Aplicaciones con Web Frameworks DWF404 G03L

En esta guía construiste una API Spring Boot con autenticación basada en JWT: configuraste el pom.xml (Spring Web, Security y JWT), definiste la seguridad con SecurityFilterChain, un AuthenticationProvider y un PasswordEncoder (NoOp para pruebas o BCrypt recomendado), creaste un JwtService para generar/validar tokens y un JwtAuthenticationFilter que extrae el token del header Authorization: Bearer ... y autentica la solicitud; implementaste un CustomUserDetailsService con un usuario de prueba y el AuthController con el endpoint público /api/auth/login que valida credenciales y devuelve el token; finalmente probaste con Postman el flujo correcto (login → usar token en endpoints protegidos) y resolviste el error 403 asegurando enviar el JWT o, temporalmente, permitiendo rutas específicas para depuración.

The screenshot displays an IDE window with the following components:

- Project Explorer:** Shows the project structure with folders for `idea`, `mvn`, `src`, `main`, `java`, and `sv.edu.udb`.
- Editor:** Displays the `SecurityConfig.java` file with the following code:

```
1 package sv.edu.udb.config;
2 import org.springframework.context.annotation.Bean;
3 import org.springframework.context.annotation.Configuration;
4 import org.springframework.security.authentication.AuthenticationManager;
5 import org.springframework.security.authentication.AuthenticationProvider;
6 import org.springframework.security.authentication.dao.DaoAuthenticationProvider;
7 import org.springframework.security.config.annotation.authentication.configuration.AuthenticationConfiguration;
8 import org.springframework.security.config.annotation.web.builders.HttpSecurity;
```
- Run Console:** Shows the output of the Spring Boot application. The output includes the following log messages:

```
2025-09-23T17:48:58.639-06:00 INFO 20036 --- [spring-jwt-basic] [main] sv.edu.udb.SpringJwtBasicApplication : Starting SpringJwtBasicApplication using Java
