

The screenshot shows an IDE window for a project named 'spring-database-hibernate'. The file 'PostRepositoryTest.java' is open, showing imports for Spring Boot test context, transactional annotations, domain entities, and utility classes. The test class is annotated with '@SpringBootTest' and contains four test methods. The Run console at the bottom shows the test execution results: '4 tests passed' with a total time of 921ms. The console output includes a ASCII art logo for Spring Boot, the version 'v3.4.8', and log messages from the application and the test runner.

```
import org.springframework.boot.test.context.SpringBootTest;
import org.springframework.transaction.annotation.Transactional;
import sv.edu.udb.repository.domain.Post;
import java.time.LocalDate;
import java.util.List;
import static org.junit.jupiter.api.Assertions.*;

@SpringBootTest
public class PostRepositoryTest {

    // ... test methods ...
}
```

Run: SpringDatabaseHibernateApplication x PostRepositoryTest x

PostRepositoryTest [sv.edu] 921 ms ✓ 4 tests passed 4 tests total, 921 ms

- ✓ shouldGetPost_When_Id 848 ms
- ✓ shouldSavePost_When_Po 13 ms
- ✓ shouldDeletePost_When_F 12 ms
- ✓ shouldHasOnePost_When 50 ms

Aprendamos a integrar Hibernate con Spring Boot, comprender sus anotaciones y configuraciones básicas, y ejecutar pruebas para validar que la conexión y las operaciones sobre la base de datos funcionan correctamente.
